Introduction xv

CHAPTER 1

Diffusion of Information and Communication Technologies to Businesses

C. Forman and A. Goldfarb	1
1. Introduction	1
2. ICT diffusion and its impact	4
2.1. Diffusion modeling	4
2.2. The impact of ICT diffusion	8
3. ICT adoption and organizational characteristics	9
3.1. Adoption, internal firm organization, and organizational change	9
3.2. Adoption and firm boundaries	14
3.3. Adoption and size	17
3.4. Technical infrastructure	18
3.5. Adoption, assimilation, intra-firm diffusion, and usage	19
4. Geographic differences in adoption	21
4.1. Adoption of ICT across urban and rural areas	23
4.2. Evidence of how ICT use influences location patterns	24
4.3. Future research	24
5. Trade-offs between organization and environment	25
5.1. Co-invention	26
5.2. Strategic issues in technology adoption	28
6. Network effects	30
6.1. Theoretical literature on direct and indirect network externalities	32
6.2. Evidence of network effects of any kind in ICT	33
6.3. Evidence of positive network externalities in ICT	35
7. Internet diffusion across countries	37
8. Conclusion	42
Acknowledgments	43
References	43

CHAPTER 2

Economics of Data Communications

P. Afèche	53
1. Introduction	53
2. Problem definition and discussion framework	56
2.1. Service demand	57
2.2. Service contracts: QoS guarantees and service designs	59

2.3.	Service production	63
2.4.	Distinctive features in comparison to telephony	67
2.5.	Pricing decisions	67
2.6.	Discussion framework	71
3.	Pricing guaranteed services	73
3.1.	Features, modeling and overview	73
3.2.	Basic pricing and allocation principles	75
3.3.	Incomplete information and adaptive pricing	78
3.4.	More differentiation	78
3.5.	Optimal dynamic pricing	80
3.6.	Conclusions and directions	81
4.	Pricing best effort services	83
4.1.	Features, modeling and overview	83
4.2.	Basic pricing and allocation principles	89
4.3.	Incomplete information and adaptive pricing	95
4.4.	More differentiation	100
4.5.	Optimal dynamic pricing	105
4.6.	Conclusions and directions	105
5.	Pricing flexible bandwidth-sharing services	106
5.1.	Features, modeling and overview	106
5.2.	Basic pricing and allocation principles	109
5.3.	Incomplete information and adaptive pricing	111
5.4.	More differentiation	115
5.5.	Optimal dynamic pricing	115
5.6.	Conclusions and directions	117
6.	Discussion	118
6.1.	Auctions versus posted prices	118
6.2.	Flat-rate versus usage-based pricing	124
6.3.	Providing QoS: overprovisioning versus control	126
7.	Conclusions	128
7.1.	Research directions	128
7.2.	Further topics and readings	129
	References	129

CHAPTER 3

Firms and Networks in Two-Sided Markets

D. F. Spulber	137
1. Introduction	137
2. Firms in two-sided markets	140
2.1. Firms in two-sided markets: matchmaking	142
2.2. Firms in two-sided markets: market making	143
2.3. Information systems and platforms	147
3. Networks in two-sided markets	151
3.1. Transactions on networks in two-sided markets	151
3.2. Basics of network theory	154
4. Assignments of buyers and sellers in a network: costly communication	156

4.1. Assignments with homogenous products	157
4.2. Assignments with differentiated products	161
4.3. Second-best assignments	165
5. Networks and the core in a two-sided market	166
5.1. The core with homogenous products	166
5.2. The core with differentiated products	167
6. Stable assignments in a decentralized two-sided market: costly computation	168
6.1. Stable assignments with homogenous products	169
6.2. Stable assignments with differentiated products	172
7. Firms and stable assignments in a centralized two-sided market	173
7.1. Firms and stable assignments with homogenous products	174
7.2. Firms and stable assignments with differentiated products	179
8. Matchmaking and market making by a firm using double auctions	181
8.1. Market making by a firm using double auctions for homogenous products	182
8.2. Matchmaking and market making by a firm using double auctions for differentiated products	183
9. Two-sided markets in random networks	188
9.1. Search and random assignments	188
9.2. Markets and random networks	193
10. Conclusion	196
Acknowledgments	197
References	197

CHAPTER 4

Organization Structure

T. Marschak	201
1. Introduction	201
2. Goals, mechanisms, and informational costs: the “incentive-free” case, where individuals obey the designer’s rules without inducement	204
2.1. Two general frameworks for judging the organization’s actions	204
2.2. How the organization finds its current action when incentives are not an issue	207
2.3. Finite approximations of mechanisms whose message spaces are continua	230
2.4. The dynamics of a mechanism	233
2.5. Constructing an informationally efficient mechanism	236
2.6. Finding a best action rule (outcome function) once a mechanism has conveyed information about the environment to each person: the methods of the Theory of Teams	238
2.7. Designing an organization "from scratch": choosing its members, what each observes, and the speak-once-only mechanism that they use	240
3. Models in which the designer is concerned with incentives as well as Informational costs	264
3.1. The message-space size required for implementation of a goal	265

3.2.	Models in which the organization's mechanism is partly designed by its self-interested members, who bear some of the informational costs	266
3.3.	Networks of self-interested decision-makers, who bear the network's informational costs	275
4.	Organizational models in which the primitive is a "task", "problem", "project", or "item"	278
5.	Concluding remarks	280
	References	281

CHAPTER 5

Open Source Software: The New Intellectual Property Paradigm

S. M. Maurer and S. Scotchmer	285	
1. Introduction	285	
2. Incentives for R&D	287	
2.1.	Intellectual property and open source	288
2.2.	Own use	290
2.3.	Complementary goods and services	290
2.4.	Signaling	293
2.5.	Education	295
2.6.	Achieving network externalities and denying them to others	295
2.7.	Social psychology	296
3. Stability and organizational issues	300	
3.1.	Who contributes, and how much?	300
3.2.	Who pays?	301
3.3.	Why licenses?	302
3.4.	Why leadership?	304
3.5.	Network effects	305
4. Efficiency implications	306	
4.1.	Disclosure of code	306
4.2.	Meeting users' needs	307
4.3.	Deadweight loss and pricing	308
4.4.	Training and using programmers	308
4.5.	Free riding	310
4.6.	Modularity and the organization of the research effort	310
5. Open source and proprietary software	312	
5.1.	Competition between open source and proprietary software	312
5.2.	Market segmentation	314
6. Limitations and extensions	315	
6.1.	Limits to open source software	315
6.2.	Beyond software: drug discovery, geographic information systems, and Wikipedia	315
7. Conclusion	318	
Acknowledgments	319	
References	319	

CHAPTER 6

Information, Search, and Price Dispersion

M. R. Baye, J. Morgan, and P. Scholten	323
1. Introduction	323
2. Theoretical models of price dispersion	331
2.1. Search-theoretic models of price dispersion	332
2.1.1. The Stigler model	333
2.1.2. The Rothschild critique and Diamond's paradox	336
2.1.3. The Reinganum model and optimal sequential search	338
2.1.4. Remarks on fixed versus sequential search	343
2.1.5. The MacMinn model	343
2.1.6. The Burdett and Judd model	346
2.2. Models with an "Information Clearinghouse"	348
2.2.1. The Rosenthal model	351
2.2.2. The Varian model	352
2.2.3. The Baye and Morgan model	354
2.2.4. Models with asymmetric consumers	357
2.2.5. Cost heterogeneities and the Spulber model	357
2.3. Bounded rationality models of price dispersion	358
2.4. Concluding remarks: theory	359
3. Empirical analysis of price dispersion	360
3.1. Measuring price dispersion	360
3.2. Price dispersion in the field	363
3.2.1. Dispersion and the "benefits" of search	363
3.2.2. Dispersion and the "cost" of search	365
3.2.3. Dispersion and the number of sellers	367
3.2.4. Dispersion and price persistence	369
3.3. Concluding remarks: empirics	370
Acknowledgments	371
References	371

CHAPTER 7

Behavior-Based Price Discrimination and Customer Recognition

D. Fudenberg and J. M. Villas-Boas	377
1. Introduction	377
2. Monopoly	379
2.1. Two-period model	380
Base model	380
No customer recognition	382
Customer recognition and behavior-based price discrimination	382
The role of commitment	383
2.2. Overlapping generations of consumers	384
No constant prices in equilibrium	386
Price cycles in equilibrium	387
2.3. Long-lived consumers	389

Long-term contracts	391
Relationship to durable goods and bargaining	393
2.4. Two-good monopoly	396
3. Competition	398
3.1. Two periods, short-term contracts	399
Analysis of the two-period model under the MHR assumption	400
Discrete distributions	403
Welfare	404
3.2. Infinite lived firms, overlapping generations of consumers, and short-term contracts	404
3.3. Long-term contracts	406
3.4. Switching costs	408
4. Behavior-based pricing with multiple products, and product design	413
4.1. Upgrades and buybacks with an anonymous second-handmarket	414
4.2. Upgrades and buybacks with non-anonymous consumers	417
4.3. Endogenous innovation	418
4.4. Endogenous location choice in duopoly	420
5. Related topics: privacy, credit markets, and customized pricing	422
5.1. Privacy	422
5.2. Credit markets	426
5.3. Customized pricing	429
6. Conclusion	431
Acknowledgements	433
References	433

CHAPTER 8

Information Technology and Switching Costs

Pei-yu Chen and L. M. Hitt

437

1. Introduction	438
2. Switching cost: definition and measurement issues	440
3. Switching costs, competition, and firm strategy	444
3.1. Switching costs and competition	444
3.2. Endogenous switching costs	444
3.3. Switching costs in information-intensive markets	445
3.4. Empirical evidence	448
Switching costs in software and other “high-tech” markets	449
Switching costs in online markets	450
4. Endogenous switching costs and firm strategy in information-intensive markets	451
5. A framework for managing switching costs	455
5.1. Introduction	455
5.2. A model of customer retention	457
5.3. Measuring switching costs	461
6. Conclusion	464
Acknowledgments	466
References	467

CHAPTER 9

The Economics of Privacy

K.-L. Hui and I.P.L. Png	471
1. Introduction	471
2. “Free market” approach	475
3. Within-market consequential externalities	476
3.1. Non-productive information	477
3.2. Productive information	480
4. Cross-market consequential externalities	481
5. Direct externalities	483
6. Property rights	485
7. Regulation	487
8. Empirical evidence	489
9. Future directions	492
Acknowledgment	493
References	493

CHAPTER 10

Product Bundling

X. Geng, M. B. Stinchcombe, and A. B. Whinston	499
1. Introduction	499
2. Bundling for price discrimination: the case of two products	502
2.1. The base model	503
2.2. Issues to be considered in monopoly bundling	503
2.2.1. Pure bundling, mixed bundling, and the combinatorial issue	504
2.2.2. Bundling products and bundling buyers	504
2.2.3. Monitoring purchase	504
2.2.4. Posted price and auction	505
2.3. Pure bundling	505
2.4. Mixed bundling	508
2.5. Extension: bundling complements or substitutes	510
3. Bundling for price discrimination: the case of many products	510
3.1. The integer programming approach	512
3.2. Pure or simple mixed bundling of many products	513
4. Bundling as competition tools	515
4.1. A monopoly market plus a competitive market	517
4.2. A monopoly market plus a potentially duopoly market: the additive valuations case	517
4.3. A monopoly market plus a potentially duopoly market: the complements case	519
4.4. Duopoly bundling	520
5. Concluding remarks	522
Acknowledgment	523

CHAPTER 11

Dynamic Pricing in the Airline Industry

R. P. McAfee and Vera L. te Velde	527
1. Airline pricing	529
2. Existing literature	529
3. Dynamic price discrimination with price commitment	534
4. Continuous time theory	536
5. Efficiency in the Gallego and van Ryzin model	541
6. Efficiently allocating limited capacity under uncertainty	541
7. The log normal case	546
8. Options and interruptible sales	548
9. Actual airline pricing patterns	551
10. Research projects and mysteries	556
11. Conclusion	561
Appendix	561
References	567

CHAPTER 12

Online Auctions

A. Ockenfels, D. H. Reiley, and A. Sadrieh	571
1. Why do information systems make auctions (even) more popular?	571
2. Single-object auctions: theory and experiments	573
2.1. Standard auction mechanisms and models	573
2.2. Bidding behavior and auction outcomes in theory	575
2.3. Bidding behavior in controlled laboratory and field experiments	577
3. Reserve prices, minimum bids, and shill bids	582
3.1. Theoretical considerations	584
3.2. Empirical and experimental observations	587
3.2.1. Entry and revenue effects of public and secret reserve prices	587
3.2.2. Auction fever	590
3.2.3. Shill bids	591
4. Late and incremental bidding	594
5. The buy-now option	599
5.1. Explaining the buy-now option with risk-aversion	600
5.2. Explaining the buy-now option with impatience and other transaction costs	601
5.3. Explaining the buy-now option with a sequence of transaction opportunities	602
5.4. Empirical and experimental evidence	603
6. Parallel markets and other outside options	605
7. Multi-item auctions	608
7.1. Standard multi-unit auction mechanisms	608
7.2. Bid shading and demand reduction in multi-unit auctions	610
7.3. Complementarities and combinatorial auctions	612

8. Design of online auctions	614
8.1. The advantages of long, open auctions	614
8.2. Controlling the pace of bidding	616
8.3. Design aspects in multi-unit auctions	620

CHAPTER 13

Reputation Mechanisms

C. Dellarocas	629
---------------	-----

1. Introduction	629
-----------------	-----

2. Signaling and sanctioning role of reputation mechanisms	633
--	-----

3. Reputation in game theory and economics	635
--	-----

3.1. Basic concepts	635
---------------------	-----

3.2. Reputation dynamics	638
--------------------------	-----

3.3. When is reputation bad?	640
------------------------------	-----

3.4. Other extensions to the basic theory	642
---	-----

4. New opportunities and challenges of online mechanisms	643
--	-----

4.1. Eliciting sufficient and honest feedback	643
---	-----

4.2. Exploring the design space of feedback mediators	645
---	-----

4.3. Coping with cheap online identities	647
--	-----

4.4. Understanding the consequences of strategic manipulation	648
---	-----

4.5. Distributed reputation mechanisms	649
--	-----

5. Empirical and experimental studies	651
---------------------------------------	-----

5.1. Empirical studies and field experiments	651
--	-----

5.2. Controlled experiments	654
-----------------------------	-----

6. Conclusions: opportunities for IS research	655
---	-----

References	657
